

Speciation and the origin of barriers to gene exchange: identifying candidate genes and gene regions

Rick Harrison
Department of Ecology
and Evolutionary Biology
Cornell University

*In this seminar, I will discuss progress toward understanding phenotypes and genotypes underlying barriers to gene exchange between two hybridizing cricket species (genus *Gryllus*) and between two pheromone “strains” of the European corn borer (genus *Ostrinia*).*

Monday, November 15, 2010
5:00 PM in Lecture Hall 2
