The Tyneside Neighbourhoods Project: Investigating the behavioural ecology of a British city

Daniel Nettle

Centre for Behavior & Evolution
Newcastle University

Cities are remarkable environments in many respects, but one of their more interesting features is their ability to generate marked variation in behaviour over very short geographical distances.

The Tyneside Neighbourhoods Project is an attempt to document and understand some of these behavioural differences between neighbourhoods within the Newcastle area, from a perspective which is ethological, ecological, and evolutionary.
